Rogerio Lucas Viana

Web Application Developer | Junior Full Stack Dev

I am Web Developer with a Higher Technical Degree in Web Application Development (DAW), specializing in the PHP Ecosystem with the Laravel framework and JavaScript. I have practical experience maintaining software across development and production environments, refactoring legacy code, and resolving issues via ticketing systems within a team using agile methodology (Scrum).

Experience

Web Application Developer Internship | (FCT), completed | Mon Event SL. | February 2026 - April 2026

- **Backend Development:** Refactored legacy code logic and stabilized the admin dashboard for improved control over user roles and permissions. Implemented a comment system for projects and tasks with automated email notifications. Refactored time-tracking management, making it significantly clearer and more maintainable for employees across desktop and mobile devices.
- **Dockerization**: Managed containers and resolved version conflicts caused by different PHP versions across multiple projects and MySQL databases.
- **Agile Organization**: Integrated into a team organized under Scrum methodology, actively participating in daily stand-ups and planning sessions, with task tracking via a Trello board.
- **Web Layout**: Adapted designs proposed by the UI/UX team into a cleaner and more modern style for their internal application, completing 90% of the overall layout implementation.

Final Degree Project Biblioteca-DAW | https://biblioteca.rogerlab.es/biblioteca

- **Full Stack Development with Laravel 12 & PHP 8.2**: End-to-end application built with complex Eloquent ORM relationships and a MySQL database. Managed lifecycle with Git and deployed to an OVHcloud VPS (formerly AWS EC2).
- **Project Organization**: Planned and tracked tasks using Trello throughout the entire project.
- **Search Engine**: Implemented advanced filtering, data persistence, and dynamic pagination for large volumes of data.
- **Security & Auth**: Built a dual authentication system (Multi-Guard) alongside an admin panel for managing content, roles, and permissions.
- **Frontend Performance**: Built a modular CSS architecture with dynamic components using Vanilla JS.

n8n Automation | Automated job search on job boards via browserless HTTP requests

- **Automated Job Search**: Deployed an n8n Docker container on an OVHcloud VPS.
- **HTTP Requests**: Sent HTTP requests to job boards to extract listings matching my CV details and specific keywords. Fully automated workflow that extracts job links and role requirements, storing the results in Google Sheets using the Google API.
- **Automation JSON Link**: *https://github.com/rogerio14698/n8n-LinkedingJob*

Skills

- **Languages**: Js, Ts, PHP, Java, Python
- **Data**: SQL, PL/SQL, XML
- **Frameworks**: Laravel + Eloquent ORM, Bootstrap, Tailwind css
- **AI Automation**: n8n, OpenAI, Git Copilot
- **DevOps**: Git and Github, Docker, Postman, Nginx, Apache
- **Cloud**: AWS (Ec2), VPS OVHCloud, GoogleCloud
- **Methodologies**: Scrum, Trello and Github Issues/Projects
